

# Centrisys Online Monitoring

Real-time Monitoring of Centrifuge Systems

## Increase Equipment availability with Real-time Monitoring

Remote Equipment Monitoring eliminates the uncertainties of equipment failures and is Centrisys' ultimate guarantee of peace of mind. Our equipment specialists can monitor your equipment when you can't; 24 hours a day, 7 days a week. With historical trending, potential breakdowns can be anticipated and minimized.

With the help of annual service plans, Remote Equipment Monitoring will reduce the total cost of ownership as well as provide historical performance data.

Remote Monitoring offers several benefits to equipment owners and operators looking to reduce costs and maximize return on investment.

### **BENEFITS**

**Reduce or Avoid Downtime:** Resolve small problems before they become big ones. Preventative based maintenance information results in reduced repair costs, lower overall operating costs and maximizes uptime.

**Efficient Centrifuge Operation:** If the centrifuge is set to operate most efficiently in a particular fashion, remote monitoring will allow you to watch for changes in the operating process that could cost thousands of dollars.

**Visibility:** Unprecedented access to the centrifuge 24/7 from virtually any location via web browser.

**Response Time:** When an issue arises with the centrifuge, notifications are immediately sent via email to the appropriate persons and/or contacted directly by Centrisys thus reducing response time and limiting your downtime.

**Reduce Maintenance and Repair Time:** Accessing the centrifuge remotely when a problem does occur allows diagnostics to be performed prior to a site visit, resulting in reduced maintenance and repair time.

**Long Term Reliability:** Monitoring 24/7 with automatic notification of service items ensure the centrifuge operates at peak performance, which ultimately results in increased reliability.
